Auger Adapter

ALL-IN-ONE

Installs anchors without removing the auger!

The new "All-In-One" Anchor/Auger Adapter eliminates the need to remove the auger in order to install anchors which makes it faster and safer. This new and improved tool is machined to fit securely in the Pilot Bit hole at the end of the auger, using the SAME bolt that holds the Pilot Bit. The exclusive pin design allows you to give a quick upward thrust on the drive wrench to engage it onto the pins.
